

License File Options

1. The **Standard License** we issue is a **non-floating USB Sentinel Dongle**, that will usually ship the same day if ordered by noon. Please **add the overnight shipping cost of \$60** to the order. The license file is locked to the Sentinel dongle. The customer doesn't need a network connection. A temporary License file is issued that will expire to ensure customer payment.
2. The option to have a **Floating Network License** is an additional 15% of the modules purchased (excluding machine definitions):
 - a. **License File** – License is locked to the IP address for the computer where the Eureka License Server software is installed. A temporary License file is issued that will expire to ensure customer payment. The Customer's computer that the License Server is installed on will need continuous internet access. If internet access is interrupted, our server will continue to try to connect every hour. After 30 days without a connection, the license will be blocked, and we need to reactivate the license from our side.
 - b. **USB Sentinel Dongle** – In a rare situation, if a Floating License is desired, but they are not able to have a continuous network connection with the computer housing the Eureka License Server, a USB Sentinel Dongle can be issued, where they can access the floating License from any computer **on their Network shared with the Eureka Server Computer with the USB Sentinel Dongle**. As with all Licenses, A temporary License file is issued that will expire to ensure customer payment.
 - c. While it may seem obvious, some customers may not realize that to have more than one simultaneous user via a floating license, they will need to purchase **one seat of Eureka for each simultaneous user**. Volume discounts are available on a case-by-case basis.
3. For **NFR Licenses** (trial, or staff), all we need is the Volume ID of the computer to issue a license that will generally expire at the end of the current year or next year if issued later in the year.
