Enhancement: Add support for 'Windows Login' type users and groups managed by Azure Active Directory (AD)

Product: SolidWorks PDM
Area: SWPDM
Sub-Area: SWPDM - Integration - Windows Explo, SWPDM - Users and Groups
Enhancement: Yes

TECHNICAL COMMENTS

Azure Active Directory is currently not supported for user management. You will have to use the regular Windows Active Directory, or use PDM login type instead.

Also note that we have reports that using view setup to connect to the archive server from clients that log into Windows with Azure Active Directory may have trouble authenticating. The workaround is to create the view via a .csv view setup script file instead. See details on workaround for view setup in S-033644.
