Instructions how to use a non-administrative Windows user for the Web2 application pool

The Web2 application will use the SOLIDWORKS PDM client API to access file vault information on the IIS server. In order for the API to be able to access the file vault, the Web2 application pool MUST run under a Windows user profile that has sufficient local registry and application data folder access, as well as COM component permissions required by the client API. For example the API needs access to the cached card images, installed add-ins and file format plugins etc.

When you log in to Windows with a user profile on the IIS server and access the local file vault view, the local application data folders and HKEY_CURRENT_USER registry entries for the vault will be created under that profile. This allows the Windows user to work in the vault. This user must also have local administrative permissions in order for the Web2 application to function.

The administrator account that you log in and administer the IIS server under is normally sufficient for this purpose, and when you configure Web2 (either for a new install or when upgrading an existing installation) you must set the SOLIDWORKS PDM Web2 application pool identity to this administrative user account. See more details on how to install Web2 in the installation guide.

If you however want to use a non-administrator user account for the Web2 setup instead of a user with local administrative permissions you can configure a new account for this purpose. Follow the instructions below after you have installed IIS and Web2 as outlined in the installation guide.

Setup the local user account

- 1. Go to **Computer Management** and create a new local user.
- 2. Give the user a name and password.
 - Note that you must update the Web2 application pool identity settings if this user password changes at a later point

🚇 Computer Management

	User must User cann Password Account is	change password at next lo not change password never expires s disabled	gon

- 3. Once the user is created, open the user properties and go to **Member Of** tab.
- 4. Add user to the local **IIS_IUSRS** group.

Assign permissions to the new account

- 1. Use Windows Explorer and give the new user **Full Control** in the **Security** tab of the following folders on the IIS server:
 - The SOLIDWORKS PDM installation folder (by default "C:\Program Files\SOLIDWORKS PDM")
 - The Web2 application installation folder (by default "C:\inetpub\wwwroot\SOLIDWORKSPDM\Web2")
 - The Windows services application data folder (by default "C:\Windows\system32\config\systemprofile\AppData\Local\SOLIDWORKS\SOLIDWORKS PDM")

2. Web2 will use SOLIDWORKS PDM COM API calls to access the file vault. To make the COM components work correctly, the new user also needs permissions to launch and activate COM objects. To grant these permissions go to Administrative tools and open Component services. Expand Component

Services, Computers, My Computer, DCOM Config.

4. Under the Security tab, Launch and Activation Permissions, select Customize and then press the Edit button. Add the new user and mark the Allow checkbox for Local Launch and Local Activation

permissions.

- 5. Repeat the procedure for the following components:
 - AddInRegSrv64
 - AddInSrv
 - AutoVuePlugin
 - DwgFmtServer
 - InventorServer
 - MsgPluginSrv
 - NetRegSrv
 - SolidEdgePlugin
 - Via3DPlugin
 - XpsPlugin

Prepare registry and local application data for the new account

1. Log off of the IIS system.

2. Log in to the IIS system with the new user account.

- 3. Browse in to the file vault view via Windows Explorer and log in as a user in the vault.
- 4. Right-click a folder or a file in the file vault view to get the required registry and local application data entries to generate for this user profile.

- 5. Log off of the vault, exit SWPDM via the tray icon and log off the IIS system.
- 6. Log in to the IIS system as the original Windows user with administrative permissions

Configure the Web2 application pool to use the new user account.

- 1. Open the Internet Information (IIS) Manager and go to the Application pools. Right-click the SOLIDWORKS PDM Web2 application pool and select Advanced Settings.
- 2. Change the **Identity** to the new user account (*computername**username*).

3. Set Load User Profile to True.
