TITLE:	How To Repair SOLIDWORKS 2022
DATE:	September 2021
SUBJECT:	SOLIDWORKS 2022 Repair Guide
ABSTRACT:	Comprehensive guide on repairing a SOLIDWORKS 2022 installation.

This guide is written for SOLIDWORKS 2022. If you are using an earlier version of SOLIDWORKS, please review or download our earlier repair documents.

If you encounter problems with an installed SOLIDWORKS Product, you can use the SOLIDWORKS Installation Manager to repair the installation.

Before loading any software, you should always login with full administrative permissions and disable any anti-virus and anti-spyware programs. Be sure your operating system has been updated with Windows Updates recently to avoid any compatibility issues with the installer.

This is not a troubleshooting guide. If you have any technical issues with SOLIDWORKS, please contact [Hawk Ridge Systems Technical Support](#).

This document is only to be distributed and used by Hawk Ridge Systems customers. Any other use is prohibited.

Before Repairing SOLIDWORKS

In order to repair an installation of SOLIDWORKS, you need to have the source files from the original installation of the version. For example, if you downloaded the original installation files, they should already be on your machine, but if they have been moved or deleted after the installation, the repair will be unsuccessful. You will need to re-download the full installation files, before starting a repair.

You can only repair an individual installation. You cannot repair an administrative image; you must uninstall the software when using an administrative image. If you have client computers that have loaded successfully from your administrative image and only wish to repair a single errant client, you should reload SOLIDWORKS by launching the StartSWInstall.hta file from this client as covered in our [Administrative Image Guide](#) document.

To Repair An Installed Product

1. Close all programs and login with full administrative rights.
2. Disable any anti-virus, anti-spyware programs. Set the User Account Controls to "Never Notify." (Start > Control Panel > User Accounts > Change User Account Control Settings)
3. Click **Start**, then locate the **Control Panel**. Once there, navigate to **programs and Features**, then choose **Uninstall a program**.
4. Select the SOLIDWORKS version you wish to repair. Click the **Change** button. You can also right click on the SOLIDWORKS version you want to repair and select **Change**. If there is not a Change button, SOLIDWORKS was installed from an administrative image.
