

# DELMIA QUEST and VMAP Log4j Procedure

Log4J is not used by DELMIA QUEST and VMAP explicitly. However it is present as part of an example (“alerter”) in FlexNet Publisher product *Imadmin* that is shipped with DELMIA QUEST and VMAP Resource Modeling & Simulation Suite.

If you do not intend to use the *alerter* example from *Imadmin-x64\_n6* zip file, you have no action.

However, if you wish to use *alerter* example for any of your tests, please download the latest version of Log4j from <https://logging.apache.org/log4j/2.x/download.html> (like 2.17) and replace *C:\Program Files\FlexNet Publisher 64-bit License Server Manager\examples\alerter\lib\log4j-1.2.8.jar* with following files from download:

*log4j-1.2-api-2.17.0.jar*

*log4j-api-2.17.0.jar*

*log4j-core-2.17.0.jar*
